Web Design	JavaScript
Visual Design	jQuery
Interface Design	Node
User Experience	Express
Design Thinking	SQL
HTML	NoSQL
CSS	React
Frameworks	HTTP & REST
Databases	MongoDB
TypeScript	GraphQL

OBJECTIVE

I am a passionate Full Stack Developer with a vast array of knowledge in front and back-end languages, responsive frameworks and databases while using best code practices. Immense ability to quickly adapt and adjust to new learning techniques and styles.

I am eagerly dedicated to learn, improve and continuously update my skill set and problem-solving techniques. I look forward to gaining an endless amount of knowledge, insight and advice from my peers, while working collaboratively to contribute to the technology industry.

PROJECTS

HOME CITY

Build a performant and scalable MERN stack single-page application that fulfills a real-world need, with a focus on data and user demand.

GitHub Repository
Deployed Application

STUDY BUDDY

Execute a design to solve a daily problem by integrating data received from multiple server-side API requests, using agile development methodologies.

GitHub Repository
Deployed Application

FAVOR TRADER

Design and build an app using the MVC paradigm, create a server-side API, add user authentication, and connect to a database.
